

Project Idea: I have developed an idea for a fictional EdTech Company called “BrightPath”. This company offers a cloud-based software service used by schools, children, and their parents through a mobile application, where users can access a dashboard to track children’s grades and progress, attendance, and the homework agenda and payments. The company is also introducing a new AI feature that helps kids with their learning at home, including their homework.

Fictional Company structure: I am considering that the company’s headquarters are in Dublin, Ireland, and its customers are residents of Ireland as well as other European countries. The company has about 520 employees and uses third-party software. The following structure for BrightPath’s Privacy Governance Team:

- External Data Protection Officer (DPO) - External Consultant
- Privacy Manager
- Information Security Manager
- IT Operations Team
- HR Team
- Marketing Team
- Product Team
- Legal Counsel
- **Privacy Analyst**

The list of software used by the company is as follows:

- Microsoft Azure → Cloud provider
- Microsoft 365 → Productivity Suite
- Dynamics 365 → CRM
- Hubspot → Marketing
- Workday → HR
- Stripe → payments
- Zendesk → Customer support
- Power BI → BI
- AI → Homework assistant, learning recommendations, chatbot.

As a Privacy Analyst, I will develop the first draft of a **RoPA and a Data Inventory System** for the company, to be submitted to my superiors for feedback before implementation.
